
TEST TRANSLATOR

MODEL : TLT

New!

The Communication Test Loop Translator (TLT series) manufactured by SMP are designed to meet high performances and reliability, together with acquisition and operating cost requests. Advanced compact design and technology enable to reach such requirements.

Various options and configurations according to specifications are available, such as gain control, input/output filters, attenuators and amplifiers, crystal or synthesized low noise oscillators.

Associated with up/down-converters, n+1 switching units, driver amplifiers and beacon receivers, such equipments enable to get complete communication system, together with MMI/monitoring and control software, designed by SMP.

MAIN FEATURES

- Minimum amplitude and delay distortion
- High frequency stability
- Low intermodulation distortion
- Low phase noise contribution
- RS-232, RS-485 or Ethernet M & C, control and monitoring interface fully compatible with most of the commercial equipments
- CE compliance
